
Abstract

A computerized method will help retailers sell more special order wallpaper and millwright and manage wallpaper and millwright catalogue book inventory better. More specifically, the computerized method will help find patterns with specific motifs and/or colors, sign wallpaper books out of a retail store, sign wallpaper books back in as they are received/returned to the store, provide the ability to define wallpaper and millwright catalogue books, provide the ability list book inventory and status, provide the ability to print marketing information on customer printouts and provide the ability to backup and restore the system database.
